

FraGer - from intermittent war to continuous peace

- Everything works - in theory
 - No way to prove everything is in FRAM
 - not enough power to do the init - need a few thousands smaller tasks
- How to improve our solution
 - Remove the entire neural network, and just use the network matrix
 - Always output that the patient is going to die: low accuracy, but you save 100% people!
- Feedback on the hackathon
 - don't use dynamic allocation in your embedded library- Bad!
 - Cool nonetheless
 - How do we pronounce your name again?

Tasks
